Impacto

¿Por qué deberíamos aprender RUST?

1000 React Componets

```
Formatter Linter Compiler soon Bundler soon Testing soon
```

```
function HelloWorld({greeting = "hello", greeted
                                                          greeting = "hello",
  if(!greeting){return null};
                                                          greeted = '"World"',
      // TODO: Don't use random in render
                                                          onMouseOver,
  let num = Math.floor (Math.random() * 1E+7).tos
                                                          if (!greeting) {
  return <div className='HelloWorld' title={`You
    <strong>{ greeting.slice( 0, 1 ).toUpperCase(
    {greeting.endsWith(",") ? " " : <span style={
                                                          // TODO: Don't use random in render
                                                          let num = Math.floor(Math.random() * 1E+7)
  { greeted }
                                                            .toString()
    { (silent)
                                                              className="HelloWorld"
                                                              title={`You are visitor number ${num}`}
                                                              onMouseOver={onMouseOver}
```

PERFORMANCE

Rome finished in 0.1s

Prettier finished in 4.3s

~25x

Faster than Prettier when formatting 85,000 lines of code. <u>See benchmark</u>.

```
Formatter
                                                 Linter
                                                             Compiler soon
                                                                                                       Testing Soon
                                                                                   Bundler Soon
function test(callback) {
                                                   main.tsx:9:3 lint/nursery/noUnreachable -
                                                     X This code will never be reached ...
   console.log(e);
                                                      > 9 | return 20;
